

## Safety Equipment

### EARTH ANCHOR

The Model 816 and Model 816T Earth Anchors are manufactured from heavy duty steel pipe and offer many advantages to rig operators.

- The sharp point and heavy duty auger allows for easy insertion into the ground
- The four blade auger provides a positive anchor once inserted at the correct depth
- The 1" thick steel handle allows easy attachment and removal of guylines and serves as a carrying handle
- Easy storage on the rig

**Self retracting lifelines** are designed to be components in personal fall arrest systems. They may be used in most situations where a combination of worker mobility and fall protection is required (i.e. inspection work, general construction, maintenance work, oil production, confined space work, etc.).

**Maverick Derrick Glide and Counter Weights.** It is recommended that weight rods be added to the counterweight, bringing the counterweight up to 3/4 of the derrickman's weight for derrick climbing assist and safety.

| MAVERICK GLIDE AND COUNTER WEIGHT |           |
|-----------------------------------|-----------|
| Net Weight                        | 175 lbs.  |
| <b>Exported Crated</b>            |           |
| Weight                            | 210 lbs.  |
| Length                            | 44"       |
| Height                            | 24"       |
| Depth                             | 12"       |
| Displacement                      | 8 cu. ft. |
